

“On-Demand PrEP is effective in preventing HIV.”

2+1+1

See **Derek's** Story at  
*comePrepd*.info

On-Demand PrEP can be used for single events of sexual activity & more suited to people who don't have sex regularly.

“At least 2 hours before sex, I would take two PrEP pills or a double dose together, then one tablet 24 hours later and 24 hours after that (2+1+1).”

PrEP is a prevention strategy where HIV negative people take medication to prevent HIV infection.
